

Smart Factory Society

From users for users

"The Smart Factory Society is the natural evolution of a user association because it unites like-minded people from many companies who all have one thing in common: the way to the Smart Factory.

As more users participate, the greater the impact on the market-driven development of MPDV's manufacturing IT.

Use the opportunity to exchange ideas with other users and become a member of the Smart Factory Society free of charge.

We have compiled the most important information for you in this brochure."

*Mathias Schmäzle, President of the
Smart Factory Society*

**Greetings from the
President**

"For MPDV, the Smart Factory Society is a central platform that helps us to further develop our manufacturing IT with our customer's needs in mind. The feedback from the working groups puts us in a position to create solutions that are both practical and user-oriented.

I wish the Smart Factory Society continued success!"

Prof. Dr.-Ing. Jürgen Kletti

Structure of the Smart Factory Society

The direct exchange with users from different areas always broadens one's own horizon and makes way for establishing important contacts with other customers, and also with MPDV employees. Furthermore, the different working groups form a perfect environment to specifically communicate market-relevant customer requests to MPDV.

Diehl Metall Stiftung & Co. KG

Attending the Smart Factory Society is always an interesting and informative experience. Especially, the conversations and exchange of experiences are of the utmost importance. I return time and time again with brand new ideas and information.

Synventive GmbH

We are part of product development thanks to the Smart Factory Society. By working together in a working group and exchanging different experiences, solutions are developed that become standard features and functions. We would not be able to achieve all this as an individual company. And besides, we often solve minor problems during these interactions without having to make major adjustments to the system. We use many features and products that were created in the working groups.
